

## KINO D4 - door foam gasket, 1:1

Print at 100% / Actual size. Do not fit to page.

Cut both solid black lines: a ring 5.3 mm wide at the sides, 3.3 at top and bottom.

Use about 2 mm foam sheet - thicker than the 1.2 mm gap it closes, or there is no preload at all.

Red dashed: active area 93.6 x 56.16 - the foam never reaches it.

Blue dashed: module outline 117.01 x 69.41 - the ring stays 0.75 mm inside it, so no foam hangs into the bay.

Stick it to the door's inner face around the window, then slide the door in.

Calibration line = exactly 100 mm. Measure it first; if it is not 100.0, the sheet was scaled.
